

Use Case Flow

Name: Chiranthan Sathrasala

SRN: PES1UG24CS565

Use Case: Submit Event Budget Proposal

Primary Actor: Club Lead

Preconditions: The Club Lead is securely logged into the Campus Academic Operations portal.

Postconditions: The budget proposal is saved in the system, and the status is set to "Pending Faculty Coordinator Approval."

Main Success Scenario:

1. The Club Lead selects the "New Event Proposal" option from the main dashboard.
2. The system displays the event proposal and budget request form.
3. The Club Lead inputs the event details (name, date, venue request) and itemized budget estimates.
4. The Club Lead clicks "Submit Proposal."
5. The system validates that all mandatory fields are completed and the budget is within standard limits.
6. The system generates a unique Proposal ID and routes it to the first stage of the approval workflow (Faculty Coordinator).
7. The system displays a confirmation message with the new Proposal ID to the Club Lead.
8. Use case ends successfully.

Alternate Flow:

- **5a. Missing or Invalid Information:**
 - 5a1. The system detects empty mandatory fields or negative budget values during validation.
 - 5a2. The system halts the submission and highlights the missing/invalid fields in red.
 - 5a3. The system prompts the Club Lead to correct the errors and resubmit.
 - 5a4. The Club Lead updates the fields and clicks "Submit Proposal" again, returning to step 5 of the main success scenario.

Use-Case Flow Document

Use Case: Purchase Event Ticket **Primary Actor:** Attendee (Student) **Preconditions:** The Attendee is logged into the portal, and the target event has active, available tickets.
Postconditions: A ticket is generated, database inventory is updated, and a receipt is emailed to the Attendee.

Main Success Scenario:

1. The Attendee logs into the Student Club Event Portal using their university credentials.
2. The Attendee browses the list of upcoming approved events and selects a specific event.
3. The system displays the event details, available ticket tiers, and remaining capacity for each tier.
4. The Attendee selects the desired ticket tier and quantity, then clicks the "Checkout" button.
5. The system temporarily reserves the selected tickets in the database and calculates the total price.
6. The system redirects the Attendee to the campus payment gateway.
7. The Attendee authorizes the payment using their campus wallet (e.g., PESUcoins).
8. The system verifies the successful payment confirmation response from the gateway.
9. The system generates the secure QR-code ticket, emails it to the Attendee, and displays a success confirmation screen.

Alternate Flow (Apply Promotional Code):

- 5a1. At step 5 of the Main Success Scenario, the Attendee inputs a promotional code provided by the Club Lead into the discount field.
- 5a2. The system verifies the code's validity and expiration status against the database.
- 5a3. The system applies the applicable discount and recalculates the final transaction price.
- 5a4. The system updates the UI to reflect the discounted amount and seamlessly resumes the main flow at step 6.

Error Flow (Payment Failure):

- 8a1. At step 8 of the Main Success Scenario, the system receives a "Payment Declined" or "Insufficient Funds" notification from the gateway.

8a2. The system immediately releases the temporary hold on the selected tickets, returning them to the available pool.

8a3. The system alerts the Attendee with a "Payment Failed" message and logs the failure.

8a4. The system offers the Attendee the option to retry the transaction using a different payment method.
